- Client Liaison

Procurement

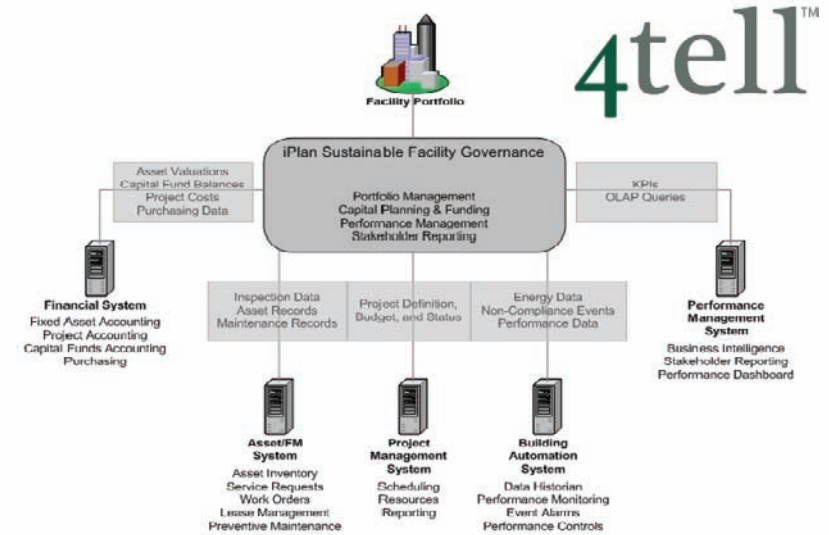

- Bid Solicitation and Evaluation
- Procurement Oversight

Construction

- On-Site Management
- Project Meetings and Status Reports
- Document Control
- Quality Control

Consultancy

- Facility Capital Planning Solutions
- Facility Sustainability Reporting

The project consists of an implementation of the iPlan™ Sustainable Facility Governance solution (iPlan™) for 28 facilities totaling 1.1 Million square feet in support of the Maine Army National Guard strategic portfolio management efforts.

We optimized our clients capital and operating lifecycle budgets, streamlined facility governance processes, maintained the clients environmental commitments, complied with federal regulations and reporting requirements and informed stakeholders through implementation of a sustainable facility governance technology platform (iPlan™). Additionally, we provided data integration services to support the business processes sustainability reporting to enhance the value and improve performance within existing facility asset portfolios.

This was achieved by providing a linkage between strategic mission and real property investment through integrating and synchronizing facilities engineering, energy, and security functions.
